

DATUM Access Scopes Catalog

Every grantable permission in the dashboard, what it unlocks, and where it applies · Prepared 2026-09-02

Reference for admins deciding what to grant a user or custom role. Grouped by the part of the dashboard each permission controls.

Total scopes: 47 grantable permission strings, defined in one place (`api-gateway/src/constants/permissions.js`) and shared by both individual user grants and custom roles.

One special value: `all` — grants everything at once and overrides every other check. Treat it as "give this user every permission below."

Worth knowing before granting filter permissions: the eight dashboard-wide filter permissions (Section E) only control whether the filter's dropdown/field is *shown* in the interface. None of them are checked again by the backend — the underlying data endpoints accept that filter parameter regardless of whether the user holds the permission. In practice this means these permissions hide a control from the interface rather than block the underlying data if someone were to request it directly. Everything else in this catalog (tabs, widgets, table columns) is enforced on both the interface and the server.

A. Global

Scope	What It Unlocks	Reference
<code>all</code>	Full access. Bypasses every other permission check across the entire dashboard and its APIs — a user with this sees and can do everything listed in this document at once.	Checked everywhere access is gated; shown as "Full Access" in the admin user list. <code>analytics/shared/middleware/identityEdge.js:150,177</code>

B. Sidebar Tabs (whole-section access)

Each of these controls whether an entire tab appears in the sidebar at all, plus the data behind it.

Scope	What It Unlocks	Reference
<code>overall_snapshot</code>	The "Overall Snapshot" tab — a cross-brand summary landing page.	<code>App.jsx:618-621</code> · sidebar tab
<code>requests_panel</code>	The "Requests" tab, where merchant requests are submitted and tracked.	<code>App.jsx:608-611</code> · <code>merchant-requests-service</code>
<code>bundles_panel</code>	The "Bundles" tab — product-bundle performance data and CSV export.	<code>App.jsx:588-591</code> · <code>analytics/modules/bundles</code>
<code>inventory_panel</code>	The "Inventory" tab (stock-level DRR/DOH report). ALSO AUTO-GRANTS the Orders, DRR, and DOH columns in the Product Performance table, even without those column permissions individually assigned.	<code>App.jsx:583-586</code> · <code>analytics/modules/product-conversion/controller.js:23,28-29</code>

<code>daily_funnel_panel</code>	The "Daily Funnel" tab — day-by-day sessions → cart → orders funnel.	App.jsx:593-596 · analytics/modules/metrics/index.js:98
<code>session_analytics</code>	The "Session Analytics" tab — visitor session-level detail.	App.jsx:613-616 · dedicated permission middleware
<code>health_monitor_panel</code>	The "Health Monitor" tab — system/site uptime and health status.	App.jsx:623-626 · health-monitor-service
<code>web_vitals_panel</code>	The dedicated "Web Vitals" tab — full page-speed/performance report (separate from the smaller widget on the Dashboard tab, see <code>web_vitals</code> below).	App.jsx:628-631 · analytics/routes/webVitals.routes.js:8
<code>product_conversion</code>	The "Product Performance" table shown on the main Dashboard tab (per-product sessions/ATC/orders/sales funnel), plus its CSV export. INTERCHANGEABLE WITH INVENTORY_PANEL for viewing the table's data (either one is enough); CSV export specifically needs this one.	DashboardRouteContainer.jsx:257,341 · analytics/modules/product-conversion/index.js:10-11

C. Requests Tab — Sub-feature

Scope	What It Unlocks	Reference
<code>requests_timeline</code>	The activity/history log shown on an individual merchant request — who did what and when. REQUIRES REQUESTS_PANEL — granting this alone automatically adds <code>requests_panel</code> too, and removing <code>requests_panel</code> automatically removes this.	merchant-requests-service/src/services/requestService.js:227 · AccessControlCard.jsx:266-275

D. Dashboard Widgets & KPI Cards

These control individual pieces of the main Dashboard tab — specific KPI cards, chart widgets, or editing capabilities — without hiding the whole tab.

Scope	What It Unlocks	Reference
<code>intent_metrics</code>	The three "Intent" KPI cards (High/Medium/Low intent sessions).	DashboardRouteContainer.jsx:534 · KPIs.jsx:1070-1100
<code>ci_events</code>	The "Checkout Initiated" KPI card, plus the CI Events column in the Daily Funnel table and Hourly Sales comparison.	DashboardRouteContainer.jsx:532 · DailyFunnelPanel.jsx:246
<code>rto_kpi</code>	The "RTO Orders (Approx.)" KPI card.	DashboardRouteContainer.jsx:533 · KPIs.jsx:2026
<code>payment_split_order</code>	The "Mode of Payment" panel and Payment Trend chart widget. EITHER-OR WITH PAYMENT_SPLIT_SALES —	dashboardLayout.js:84-85

	holding just one of the two unlocks both widgets.	
payment_split_sales	Same Mode of Payment panel / Payment Trend widget as above — no separate effect found beyond the either-or pairing with payment_split_order.	dashboardLayout.js:84-85
traffic_split	The "Traffic Split" widget (Meta / Google / Direct / Others breakdown).	dashboardLayout.js:92
web_vitals	The "Top Pages" mini-widget and the "Web Performance (Avg)" panel — both on the main Dashboard tab. Separate from the dedicated Web Vitals tab (web_vitals_panel).	dashboardLayout.js:88 · DashboardRouteContainer.jsx:565,574,612
daily_insight_view	A short written "insight" note shown at the top of the Dashboard tab for the day.	daily-insights-service/src/routes/dailyInsights.js:21
sessions_drop_off_funnel	The "Sessions Drop-off Funnel" chart (Sessions → Add to Cart → Checkout → Orders).	DashboardRouteContainer.jsx:250
compare_mode	The "Compare" toggle in the Product Performance table (view current vs. a prior period side by side).	DashboardRouteContainer.jsx:355 · ProductConversionTable.jsx:1877-1882
multiselectable_kpi_cards	Lets a user pin multiple KPI cards at once for the trend chart, instead of only one at a time.	App.jsx:579-581,1397,1752
dashboard_layout_customize	The ability to drag-and-drop rearrange and save a custom Dashboard widget layout. Without it, the layout is fixed and there's no "Customize Layout" button.	App.jsx:576-578,2379-2384 · analytics/modules/dashboard/index.js:17,35

E. Dashboard-Wide Filters INTERFACE-ONLY, SEE NOTE ABOVE

Each controls one filter field in the dashboard's filter bar / mobile filter drawer. Not enforced server-side — see the callout at the top of this document.

Scope	What It Unlocks	Reference
product_filter	The "Product" filter dropdown.	App.jsx:2491,2576,2610
utm_filter	The UTM (source/medium/campaign/term/content) filter control.	App.jsx:2492,2599,2611
product_utm_filter_sync	Allows a Product filter and a UTM-source filter to be applied together at the same time. Without it, choosing one clears the other. ONLY ENFORCED PERMISSION IN THIS SECTION — this one is checked on the backend too.	App.jsx:818 · summaryController.js:40-47

discount_filter	The "Discount code" filter field.	App.jsx:1847,2496,2602,2645
sales_channel_filter	The "Sales Channel" filter dropdown (e.g. website vs. app).	App.jsx:2493,2600,2612
device_type_filter	The "Device Type" filter dropdown (Desktop / Mobile / Others).	App.jsx:2494,2614
product_type_filter	The "Product Type" (division) filter, mobile drawer.	App.jsx:2497,2649
city_filter	The "City" filter dropdown.	App.jsx:2495,2601,2613

F. Daily Funnel — Sub-features

Scope	What It Unlocks	Reference
utm_funnel_table	Adds a UTM (marketing source) breakdown to the Daily Funnel tab's data. REQUIRES DAILY_FUNNEL_PANEL to have any effect.	trendController.js:66-70
utm_funnel_table:utm_campaign_grain	Breaks that UTM data down further by campaign name, not just source/medium. REQUIRES UTM_FUNNEL_TABLE .	trendController.js:71-74

G. Product Performance Table — Columns

Each controls one column in the Product Performance table (shown on the Dashboard tab and the dedicated Product Funnel page).

Scope	What It Unlocks	Reference / Notes
product_conversion:landing_page_path	The "Landing Page" column. ALWAYS SHOWN — this permission has no real effect since every user who can see the table gets this column regardless.	product-conversion/controller.js:32-33
product_conversion:sessions	The "Sessions" column.	controller.js:24-26
product_conversion:atc	The "ATC" (Add to Cart count) column.	controller.js:24-26
product_conversion:atc_rate	The "ATC Rate" column.	controller.js:24-26
product_conversion:orders	The "Orders" column. AUTO-GRANTED BY INVENTORY_PANEL even without this permission set directly.	controller.js:23,28-29
product_conversion:sales	The "Sales" (revenue) column. Not auto-granted by inventory_panel.	controller.js:24-26
product_conversion:cvr	The "CVR" (Conversion Rate) column.	controller.js:24-26

product_conversion:drn	The "DRR" (Daily Run Rate) column. AUTO-GRANTED BY INVENTORY_PANEL .	controller.js:23,28-29
product_conversion:doh	The "DOH" (Days of Stock) column. AUTO-GRANTED BY INVENTORY_PANEL . Sorting on DRR/DOH was removed dashboard-wide; filtering by them still works.	controller.js:23,28-29

H. Product Performance Table — Filters

Scope	What It Unlocks	Reference / Notes
product_table_filters	A catch-all that grants all the filters below at once. Only acts as a catch-all if none of the specific filter permissions in this section (or the column permissions in Section G) are individually assigned — once any specific one is granted, this stops being a blanket grant.	ProductConversionTable.jsx:1727-1733
product_table_filters:inventory	The "Inventory Analysis" filter (change the DRR/DOH lookback period). REQUIRES DRR OR DOH COLUMN ACCESS — without at least one of those two column permissions, this filter stays hidden even if granted.	ProductConversionTable.jsx:872-874
product_table_filters:page_type	The "Page Type" filter (Product vs. Collection pages).	ProductConversionTable.jsx:951-952
product_table_filters:product_types	The "Product Types" filter.	ProductConversionTable.jsx:1017-1018
product_table_filters:sort_filter	The ability to change the table's sort order/criteria.	ProductConversionTable.jsx:1130-1131

Internal reference document — DATUM access scopes. All 47 permission strings defined in `api-gateway/src/constants/permissions.js` are covered above (Sections A-H). Line-number references reflect the codebase as of this document's preparation date and may shift as the code changes; the permission string itself is the stable identifier to search for if a reference goes stale.
